### Question

Find the acute angle between the planes  $\mathbf{r} \cdot (\hat{i} - 2\hat{j} - 2\hat{k}) = 1$  and  $\mathbf{r} \cdot (3\hat{i} - 6\hat{j} + 2\hat{k}) = 0$

### Solution

Let the normal vectors be

$$\mathbf{n}_1 = \begin{pmatrix} 1 \\ -2 \\ -2 \end{pmatrix} \quad (1)$$

$$\mathbf{n}_2 = \begin{pmatrix} 3 \\ -6 \\ 2 \end{pmatrix} \quad (2)$$

The formula to calculate the angle between the two planes is

$$\theta = \frac{\pi}{2} - \cos^{-1} \left( \frac{\mathbf{n}_1^T \mathbf{n}_2}{|\mathbf{n}_1| |\mathbf{n}_2|} \right) = \sin^{-1} \left( \frac{\mathbf{n}_1^T \mathbf{n}_2}{|\mathbf{n}_1| |\mathbf{n}_2|} \right) \quad (3)$$

Substituting  $\mathbf{n}_1, \mathbf{n}_2$  in this formula :

$$\theta = \sin^{-1} \left( \frac{\left( \begin{pmatrix} 1 \\ -2 \\ -2 \end{pmatrix}^T \begin{pmatrix} 3 \\ -6 \\ 2 \end{pmatrix} \right)}{\left| \begin{pmatrix} 1 \\ -2 \\ -2 \end{pmatrix} \right| \left| \begin{pmatrix} 3 \\ -6 \\ 2 \end{pmatrix} \right|} \right) = \sin^{-1} \left( \frac{19}{|3||7|} \right) = \sin^{-1} \left( \frac{11}{21} \right) \quad (4)$$

This is  $31.58906757233914^\circ$

Plot of the planes
