Question

Find the equation of a plane which bisects perpendicularly the line joining the points A(2,3,4) and B(4,5,8) at right angles.

Equation

Let,

$$\mathbf{A} = \begin{pmatrix} 2 \\ 3 \\ 4 \end{pmatrix} \quad and \quad \mathbf{B} = \begin{pmatrix} 4 \\ 5 \\ 8 \end{pmatrix} \tag{1}$$

Given that the plane is a perpendicular bisector to the line joining points A and B. Since it is a perpendicular bisector to the line joining points A and B, the midpoint of the line joining points A and B lies on the plane. Let the midpoint of points A and B be A. Then

$$||\mathbf{X} - \mathbf{A}||^2 = ||\mathbf{X} - \mathbf{B}||^2 \tag{2}$$

$$||\mathbf{X}||^2 + ||\mathbf{A}||^2 - 2||\mathbf{X}|| ||\mathbf{A}|| = ||\mathbf{X}||^2 + ||\mathbf{B}||^2 - 2||\mathbf{X}|| ||\mathbf{B}||$$
 (3)

$$||\mathbf{A}||^2 - 2||\mathbf{X}|| ||\mathbf{A}|| = ||\mathbf{B}||^2 - 2||\mathbf{X}|| ||\mathbf{B}||$$
 (4)

$$||\mathbf{A}||^2 - ||\mathbf{B}||^2 = 2\mathbf{X}^{\mathsf{T}}\mathbf{A} - 2\mathbf{X}^{\mathsf{T}}\mathbf{B}$$
 (5)

$$||\mathbf{A}||^2 - ||\mathbf{B}||^2 = 2\mathbf{X}^{\mathsf{T}}(\mathbf{A} - \mathbf{B})$$
 (6)

which can be written as:

$$||\mathbf{A}||^2 - ||\mathbf{B}||^2 = 2(\mathbf{A} - \mathbf{B})^T \mathbf{X}$$
 (7)

$$(\mathbf{A} - \mathbf{B})^T \mathbf{X} = \frac{||\mathbf{A}||^2 - ||\mathbf{B}||^2}{2}$$
 (8)

Now,

$$\mathbf{A} - \mathbf{B} = \begin{pmatrix} 2 \\ 3 \\ 4 \end{pmatrix} - \begin{pmatrix} 4 \\ 5 \\ 8 \end{pmatrix} \tag{9}$$

$$\mathbf{A} - \mathbf{B} = \begin{pmatrix} -2 \\ -2 \\ -4 \end{pmatrix} \tag{10}$$

And

$$||\mathbf{A}|| = \sqrt{\mathbf{A}^{\mathsf{T}}\mathbf{A}} \tag{11}$$

$$||\mathbf{A}|| = \sqrt{2(2) + 3(3) + 4(4)}$$
 (12)

$$||\mathbf{A}|| = \sqrt{29} \tag{13}$$

$$||\mathbf{B}|| = \sqrt{\mathbf{B}^{\mathsf{T}}\mathbf{B}} \tag{14}$$

$$||\mathbf{B}|| = \sqrt{4(4) + 5(5) + 8(8)} \tag{15}$$

$$||\mathbf{B}|| = \sqrt{105} \tag{16}$$

Now substituting the respective value in Eq.8:

$$\begin{pmatrix} 1 & 1 & 2 \end{pmatrix} \mathbf{X} = 19 \tag{18}$$

Hence the equation of the plane is given by:

$$\begin{pmatrix} 1 & 1 & 2 \end{pmatrix} \mathbf{X} = 19 \tag{19}$$

C Code - Midpoint formula

```
#include <stdio.h>
void midpoint(double A[3], double B[3], double M[3]) {
   M[0] = (A[0] + B[0]) / 2.0;
   M[1] = (A[1] + B[1]) / 2.0;
   M[2] = (A[2] + B[2]) / 2.0;
void normal(double A[3], double B[3], double N[3]) {
   N[0] = B[0] - A[0];
   N[1] = B[1] - A[1];
   N[2] = B[2] - A[2]:
// Compute plane constant: d = -(N M)
double plane constant(double N[3], double M[3]) {
   return -(N[0]*M[0] + N[1]*M[1] + N[2]*M[2]);
```

```
import ctypes
import numpy as np
import matplotlib.pyplot as plt
# Load compiled C library
